

Electrical System Modifications (ESM)

The U.S. Government (USG) identified the need for an increased power supply within the USMC LAV A2 fleet. In the past year, General Dynamics Land Systems, with the support of the USG, identified and chose a solution.

- The ESM kit will include upgrades such as: 550-amp alternator, improved LAV-25 slip ring, advancements to all associated electrical architecture
- The ESM kit includes the newly developed High Powered Distribution Module (HPDM), providing additional power channels to meet the needs of the Marines now and into the future
